	(40)	3
	(41)	1

4	<p>Space offers infinite resources and opportunities, and, despite the cost, exploring it should be a priority for governments. Apart from the chance of discovering planets offering potential refuge outside of Earth, space exploration could allow contact with advanced life forms, and it provides countries opportunities to cooperate and strengthen international relations.</p> <p>Global warming and overpopulation pose a threat to the sustainability of life on Earth. The day will come when humans can no longer subsist on Earth's dwindling resources. As such, humans must discover habitable planets outside our solar system. Without a refuge to escape to, humanity could indeed die out.</p> <p>Secondly, the prospect of discovering intelligent alien life forms has been dreamt of throughout history. Technological advances such as methods for detecting distant planets have brought humanity closer to achieving this dream. Alien intelligence could solve myriad problems on Earth, from curing diseases to making resources more sustainable. Discovering advanced beings could vastly improve life on our planet.</p> <p>Lastly, space exploration affords the opportunity for unprecedented international cooperation. The International Space Station, for example, is used for research by scientists from around the world. News of their combined efforts to achieve common scientific objectives unites countries. This is much needed at a time when tensions are high on the international stage.</p> <p>Space exploration is essential to humanity's survival. The costs involved pale in comparison to the benefits humans stand to gain from finding habitable planets, learning from intelligent life forms, and international collaboration.</p>
