4	I think farming with new technology will become more common in the future. First, by using drones and robots, work can be done more efficiently with fewer people. This is a big advantage for farms that suffer from a lack of workers. Second, using new technology in farming will attract more and more young people. Many of them want to use their knowledge of new technology to change traditional industries. One example is growing vegetables in buildings where computers control the farming process. Therefore, I think using new technology in farming will become more common in the future.
