| 4 | <p>Some people are working to make sure that free school lunches remain available to all students. Program supporters believe that ensuring all students have lunch can help boost their academic performance. Moreover, providing free school lunches allows parents with limited time to focus on other responsibilities. However, critics argue that the food discarded from unfinished meals creates a significant quantity of waste.</p> |
| 5 | <p>The government should encourage the use of vacant land in urban areas for farming. The reasons for this are related to costs and population.</p> <p>First, urban farming can reduce costs for urban residents. Food prices in cities can be high due to the fees required to transport produce from faraway farms. However, growing crops on urban land can bring such costs down. Fresh food can be sold locally at cheaper prices, lowering the expenses associated with urban life.</p> <p>Additionally, reusing empty land in urban areas for farming can help with population increases. As populations in such areas expand, the need for food becomes urgent. Farming in cities, thankfully, can provide a solution, as the crops cultivated can help satisfy rising food demands.</p> <p>In conclusion, the government should ensure empty land in cities is used for farming because it can lower living costs for urban residents and feed growing city populations.</p> |
