4	Pictograms have become very common worldwide. They are very useful because they are easy to understand and give information very quickly. However, they can lead the viewer to misinterpret the intended messages when they have multiple meanings. Also, they are ineffective for serious or personal communication because they are not good at conveying complex ideas.
5	I think this is a good idea. First, students can improve the quality of their assignments. By using AI, they can collect information and write papers more efficiently. This will lead to completing reports and essays in a shorter time and having more time for reviewing. Second, becoming familiar with AI technology will be useful for future job opportunities. Many industries are already adopting AI, so being able to use it from their student years can be a significant advantage. Therefore, I think it is a good idea for university students to use AI to do their assignments.
