4	Nowadays, many Japanese universities welcome foreign students. This helps campuses become more global and makes it possible for the universities to maintain their student numbers. However, some international students cannot enjoy their stay in Japan because living costs are going up rapidly every year. Also, some students struggle to build friendships because of language barriers.
5	I think this is a good idea. First, it can help solve the problem of labor shortages. Many cities struggle to find enough professional drivers, and self-driving technology ensures that public transportation remains available even in areas where there are not enough drivers. Second, it can improve road safety. Self-driving buses do not get tired or distracted as humans do, so they may be less likely to cause accidents or drive badly, allowing people to travel more safely. Therefore, I think it is a good idea for cities to introduce self-driving buses for public transportation.
